

# Key findings from the NT Ecstasy and Related Drugs Reporting System interviews, 2018

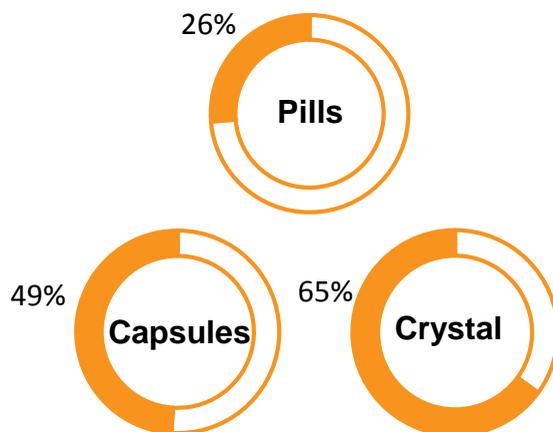

Annual cross-sectional interviews from 2003 to 2018 with people who use ecstasy and other stimulants, recruited from Darwin

## Past six month ecstasy use

## Perceived purity as high

## Risks and Harms

34%

of the sample self-reported experiencing a **mental health problem** in the past six months

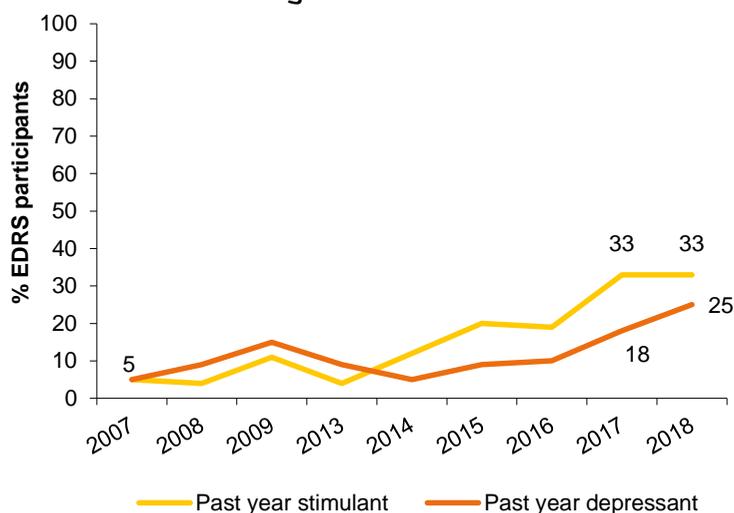

98%

reported using a combination of depressants, cannabis or hallucinogens/dissociatives on their last occasion of stimulant use

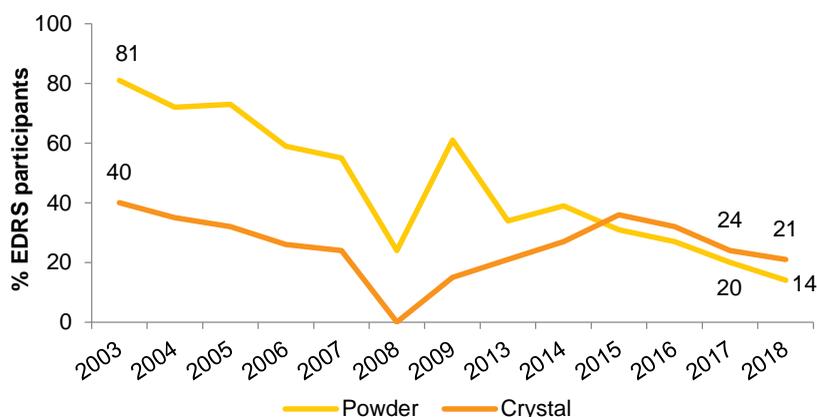

16%

reported use of capsules with unknown contents in the six months preceding interview

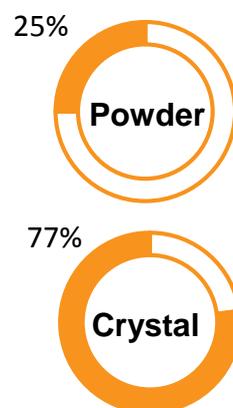

## Past year non-fatal overdose

## Past six month methamphetamine use

## Perceived purity as high

27%

of the sample reported using any methamphetamine in the last six months

Due to the small samples recruited in 2010-2012 (n=27, n=11, n=12, respectively), data from these years are not presented. For more information about the IDRS and EDRS, please contact [drugtrends@unsw.edu.au](mailto:drugtrends@unsw.edu.au)
